

Demo catalog

The package contains 28 Unity scenes: 23 focused feature demos, a guided documentation demo, an Adventure Communist-style showcase, and three experimental scenes.

Table of contents

- [Run a demo](#)
- [Focused feature demos](#)
- [Larger demos](#)
- [Experimental scenes](#)
- [Demo presentation notes](#)

Run a demo

1. Open the scene from the path in the catalog.
2. Inspect the scene's `ReadMe` asset and controller component.
3. Confirm the required managers exist on the scene manager `GameObject`.
4. Enter Play Mode.
5. Use the setup section in the in-scene readme to drive the intended interaction.

Focused feature demos live at `EasyIdleGame > Demos > FeatureDemos`. Open a scene from the catalog, then select its adjacent `ReadMe.asset` for setup notes and the resource prefix.

Each focused demo folder contains the scene, its `ReadMe.asset`, a small controller script demonstrating the public API, and prefixed definition assets under its own `Resources` folder. The prefixes keep demo assets distinct even though `Resources.LoadAll` sees assets project-wide.

Focused feature demos

Demo	Scene	What it demonstrates
Basic Flow	<code>EasyIdleGame > Demos > FeatureDemos > 01_BasicFlow > BasicFlow.unity</code>	One business, manager, permanent upgrade, temporary boost, player XP, and prestige in a minimal loop
Boosts And Upgrades	<code>EasyIdleGame > Demos > FeatureDemos > BoostsAndUpgrades > BoostsAndUpgrades.unity</code>	Temporary boosts, permanent upgrades, duration merging, business-group targeting, and wallet-cap overrides
Business Chaining	<code>EasyIdleGame > Demos > FeatureDemos > BusinessChaining > BusinessChaining.unity</code>	One business output creates another business, which then produces currency
Business Group Targeting	<code>EasyIdleGame > Demos > FeatureDemos > BusinessGroupTargeting > BusinessGroupTargeting.unity</code>	Typed <code>BusinessGroup</code> targeting; empty target groups behave globally
Business Level Upgrades	<code>EasyIdleGame > Demos > FeatureDemos > BusinessLevelUpgrades > BusinessLevelUpgrades.unity</code>	<code>BusinessUpgradeLevel</code> metadata and limit overrides; <code>-1</code> represents unlimited
Custom Save And Autosave	<code>EasyIdleGame > Demos > FeatureDemos > CustomSaveAndAutosave > CustomSaveAndAutosave.unity</code>	A <code>SaveFile</code> subclass with project state, toggleable save-worthy event coalescing, load-guarded autosave, and offline reapplication
Daily Rewards	<code>EasyIdleGame > Demos > FeatureDemos > DailyRewards > DailyRewards.unity</code>	Current day, missed days, exact/repeating rewards, claiming, and countdown
Drop Table Rewards	<code>EasyIdleGame > Demos > FeatureDemos > DropTableRewards > DropTableRewards.unity</code>	Independent chance tables and weighted-random reward pools

Event Listener Showcase	EasyIdleGame > Demos > FeatureDemos > EventListenerShowcase > EventListenerShowcase.unity	A pinned chip per runtime UnityEvent of a small business/boost/manager loop; each flashes the instant its event fires, with a live payload feed
Location Travel	EasyIdleGame > Demos > FeatureDemos > LocationTravel > LocationTravel.unity	Locked/unlocked worlds, travel costs, starter rewards, and TryTravelTo
Locks And Buy Amounts	EasyIdleGame > Demos > FeatureDemos > LocksAndBuyAmounts > LocksAndBuyAmounts.unity	Fixed/percent/max purchases plus lower locks, upper locks, and shared caps
Managers And Automation	EasyIdleGame > Demos > FeatureDemos > ManagersAndAutomation > ManagersAndAutomation.unity	Automatic production/collection, passive modifiers, active abilities, and cooldowns
Merging Recipes	EasyIdleGame > Demos > FeatureDemos > MergingRecipes > MergingRecipes.unity	Business/currency inputs, drop-table outputs, recipe lookup, and merging
Offers And Time Skip	EasyIdleGame > Demos > FeatureDemos > OffersAndTimeSkip > OffersAndTimeSkip.unity	Weighted limited-time offers and TimeSkipBoost offline-style production
Offline Profit Application	EasyIdleGame > Demos > FeatureDemos > OfflineProfitApplication > OfflineProfitApplication.unity	Elapsed time to ProfitData, applying the economy result, and ProfitApplicationSummary
Player Progression	EasyIdleGame > Demos > FeatureDemos > PlayerProgression > PlayerProgression.unity	Player XP, currency totals, custom stats, business levels, and achievements
Prestige Resets	EasyIdleGame > Demos > FeatureDemos > PrestigeResets > PrestigeResets.unity	Requirements, rewards, reset flags, currency exclusions, and persistent upgrade blocks
Production And Collection	EasyIdleGame > Demos > FeatureDemos > ProductionAndCollection > ProductionAndCollection.unity	Manual/automatic production, stored outputs, claiming, and manager auto-collection
Production Costs	EasyIdleGame > Demos > FeatureDemos > ProductionCosts > ProductionCosts.unity	Input spending at round start, scaled and partial batches, and consumeOnProduce
Production Modifiers	EasyIdleGame > Demos > FeatureDemos > ProductionModifiers > ProductionModifiers.unity	An ordinary fixed-output factory compared with a separate toggleable modifier that adds Coins by owned amount in round, per-second, active, and offline calculations
Shop Reward Completion	EasyIdleGame > Demos > FeatureDemos > ShopRewardCompletion > ShopRewardCompletion.unity	External purchase callbacks, CompleteExternalPurchase, rewards, and consumable behavior
Timed Upgrade Queues	EasyIdleGame > Demos > FeatureDemos > TimedUpgradeQueues > TimedUpgradeQueues.unity	Delayed upgrades, parallel/sequential queues, pending state, and skipUpgradewait
Wrapper Variants	EasyIdleGame > Demos > FeatureDemos > WrapperVariants > WrapperVariants.unity	BusinessWrapper copies, scaling, synchronization, remapped references, and isolated holder state

All scene locations in the table start at the relative package root, `EasyIdleGame` .

Larger demos

DocsDemo

Location: `EasyIdleGame > Demos > DocsDemo > DocsScene.unity`

Use this scene to see a multi-step setup with managers, ScriptableObject definitions, displayers, save/load, offline profit, prestige, and audio in one place.

AdventureCommunist

Open the `.unity` scene below `EasyIdleGame > Demos > AdventureCommunist`. This is a presentation-heavy example that combines more assets and UI than the focused scenes. Use it for composition and display patterns, not as the shortest explanation of a single feature.

Experimental scenes

The scenes below `EasyIdleGame > Demos > _ExperimentalScenes` are development-testing content, not supported samples. They are undocumented, may change or disappear in updates, and are not a reference for public features — use the focused feature demos instead.

Demo presentation notes

The demos are designed for a portrait, mobile-style view; preview them at a `9:16` or taller aspect ratio. The focused feature demos use UI Toolkit. `DocsDemo` and `AdventureCommunist` use uGUI with TextMeshPro — import TMP essentials before opening them, and set the TMP outline to `0.42` where a material should match the provided look.

These settings affect only how the demos look, not the economy runtime.
